

## ASSIGNMENT-4

NAME:MAHESWARI J

REG NO:710719104057

MAXIMUM MARKS: 2 MARKS

### QUESTION

Write code and connections in wokwi for ultrasonic sensor. Whenever distance is less than 100cms send “alert” to ibm cloud and display in device recent events

### PROGRAM:

```
const int TRIG_PIN = 7;
const int ECHO_PIN = 8;
// Anything over 400 cm (23200 us pulse) is "out of range"
const unsigned int max_dist = 23200;
void setup() {
  // The Trigger pin will tell the sensor to range find
  pinMode(TRIG_PIN, OUTPUT);
  digitalWrite(TRIG_PIN, LOW);
  //Set Echo pin as input to measure the time duration of pulse returning back
  from the distance sensor
  pinMode(ECHO_PIN, INPUT);
  // We'll use the serial monitor to view the sensor output
  Serial.begin(9600);
}
void loop() {
  unsigned long t1;
  unsigned long t2;
  unsigned long pulse_width;
  float cm;
  float inches;
  // Hold the trigger pin high for at least 10 us
  digitalWrite(TRIG_PIN, HIGH);
  delayMicroseconds(10);
  digitalWrite(TRIG_PIN, LOW);
  // Wait for pulse on echo pin
  while ( digitalRead(ECHO_PIN) == 0 );
```

```

// Measure how long the echo pin was held high (pulse width)
// Note: the micros() counter will overflow after ~70 min
t1 = micros();
while ( digitalRead(ECHO_PIN) == 1);
t2 = micros();
pulse_width = t2 - t1;
// Calculate distance in centimeters and inches. The constants
// are found in the datasheet, and calculated from the assumed speed
// of sound in air at sea level (~340 m/s).
cm = pulse_width / 58.0;
inches = pulse_width / 148.0;
// Print out results
if ( pulse_width > max_dist ) {
  Serial.println("Out of range");
} else
{ Serial.println("*****")
; Serial.print("Distance Measured in cm : ");
Serial.println(cm);
if(cm<100){
// while(true){
Serial.println("Alert !!");
// }
}
Serial.print("*****");
}
// Wait at least 1000ms before next measurement
delay(1000);
}

```

## OUTPUT:

Distance Measured (cm) : 2.07

Alert !!!

Distance Measured (cm):2.00

Alert !!!

## SCREENSHOT:
